

Canadian Steel:

Helping to energize Canada's economy

Specialized pipes and connections inject high-pressure steam into oilsands deposits. Heated oil is then brought to the surface for processing.

Steel products play a critical role in developing Canada's energy resources

Developing and transporting Canada's energy resources through innovative, safe and dependable energy networks. Continually investing in new technologies to develop advanced steel products for the most demanding energy environments.

Helping bring energy to Canadians: another way steel makes Canada stronger.
